Reverse Engineer · Open Source Contributor · Computer Science and Engineering

Education

Cochin University of Science & Technology (CUSAT) Kerala, 2024 – 2028
B.Tech in Computer Science & Engineering CGPA: 8.84

Experience

Software Developer & Reverse Engineer, *Latelogic* *Feb 2026 – Present, Kozhikode*

- Contribute to production backend services in **Go** and build internal tooling for the engineering team.
- Reverse engineer web and mobile applications and develop software solutions for production use.
- Analyze obfuscated code and protocols to build reliable integrations and internal tooling.

Software Developer Intern, *Lascade* *May 2025 – Feb 2026, Kozhikode*

- Built backend components, internal tools, and web scraping systems for production.
- Implemented API logic and data processing; debugged and optimized existing codebases to improve reliability.
- Collaborated with the team to ship features and resolve production issues in a fast-paced environment.

Open Source Contributor, *Rizin* *3.9k+ GitHub stars* · Merged PRs

- Contributed memory-safe **C** components and bug fixes to the Rizin reverse engineering framework.
- Resolved multiple issues and improved overall code reliability.

Mentor, *SOCE & EOC* *Jan 2025 – Present, Kochi*

- Guided students on technical projects and supported their technical development.

Security Researcher

- Discovered and responsibly disclosed multiple vulnerabilities to private organizations.
- Identified and reported security flaws in critical government web platforms.

Featured Projects

Akamai v3 Deobfuscator & **Sensor Decryptor** – *Babel, Node, Go*

- Built a **Babel** AST pipeline to deobfuscate Akamai's sensor script and analyze its bot detection.
- Reversed control-flow flattening, stub functions, encoded arrays, and runtime-generated values.
- Defeated advanced VM-based JavaScript obfuscation and recovered the underlying program logic.
- Reimplemented its telemetry encryption in **Go** to decrypt captured sensor payloads.

HTTP Server in Rust – *Rust, Docker, Caddy*

- Built an HTTP/1.1 server from scratch on raw TCP sockets using only the **Rust** standard library.
- Implemented request parsing, validation, header handling, a function-pointer router, and redirects.
- Containerized with a multi-stage Docker build and deployed behind a Caddy TLS reverse proxy.

Neural Network in C++ – *C++, CMake*

- Implemented a feed-forward neural network from scratch with no external libraries.

CUSAT University Websites – *Django, HTML, CSS, JavaScript, Bootstrap, Nginx*

- Maintained multiple live **CUSAT** department and event websites: sif.cusat.ac.in, cbs.cusat.ac.in, sargam.cusat.ac.in, and fyugp.cusat.ac.in.

Technical Skills

- **Languages:** C/C++, Go, Python (Django, Playwright, Pwntools, Selenium), Java, JavaScript, Bash, SQL, Assembly.
- **Security:** Web & mobile pentesting, binary analysis, ROP, reverse engineering of binaries and obfuscated JS.
- **Tools:** Ghidra, Jadx, Frida, GDB, Valgrind, Babel, Oxc (Rust), SDL, Git, Docker.
